Fetal Alcohol Spectrum Disorder (FASD) Family Capacity Building Workshop

Fetal Alcohol Spectrum Disorder (FASD) is a diagnostic term describing the impacts on the brain and body of individuals prenatally exposed to alcohol. FASD is a lifelong disability, and individuals may experience some challenges in their physical, mental, learning, behavioural and/or social skill.

This March, the Coordinated Service Planning Provincial (CSP) Network is hosting interactive online workshops to help caregivers across Ontario increase their knowledge and practical skills to support children and youth with FASD. The event will be led by FASD workers who will explain to caregivers of children and youth with FASD how to identify symptoms of the disorder, provide recommendations for support, and help families see the benefits of focusing on their child's strengths.

Health care professionals will also benefit from learning more about real-life tools and day-to-day strategies that support optimal outcomes for individuals diagnosed with FASD.

Participants will explore effective FASD resources, relevant provincial programs and supports, and other financial supports.

Date: March 9, 2021

Time: 10:00 a.m. – 12:30 p.m.
